                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:18. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)
                                                                                                                                                                                             Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The clone sequenced to the left is RPI1-449E13. Actual start of this clone is at base position 1 of RPI1-272E3; actual end is at base position 190998 of RPI1-272E3.
                                                                                                                                                                                                                                                                        sequence, see http://genome.wustl.edu/gsc

Xhol; RNA was supplied by Christian Bachem & Beatrix
Horvath(Laboratory of Plant Breeding, Dept. of Plant
Sclences, Wageningen University, The Netherlands). Total
RNA was isolated from developing axillary buds of potato
nodal stem cuttings cultured on medium for the
introduction of tuber formation as described in Bachem et
al. (Plant Journal 1996). Tissue samples were taken of
stages corresponding to growing stolons and the early
stages of tuber formation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anote-Total Sour Steel: Scori; Site_1: Scori; Site_2: Anote-Total Steel: Most was supplied by Christian Bachem & Beatrix Horvath(Laboratory of Plant Breeding, Dept. of Plant Sciences, Wageningen University, The Netherlands). Total RNA was isolated from developing axillary buds of potato nodal stem cuttings cultured on medium for the Introduction of tuber formation as described in Bachem et al. (Plant Journal 1996). Tissue samples were taken of stages corresponding to growing stolons and the early stages of tuber formation."

Separate cDNAS were generated using primers that incorporated unique 5' and 3' tags to distinguish each source of RNA. cDNAS were then pooled, size-fractionated directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Helianthus annuus

The cotyledons were flash-frozen in liquid nitrogen. Stratagene's cDNA Synthesis Kit (catalog number 200401) was used to synthesize the CDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V-A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAAATAGTCTCGAG(7)18V) to anohor the primer at the 5' end of the poly(A) tract. After second strand synthesis, the CDNA ends were filled in with clonder Ptu DNA, ligated to ECORI adapters and subsequently phosphorylated. The CDNA was then
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AW596303 535 bp mRNA linear EST 03-DEC-2001 sj01fil.yl Gm-c1032 Glycine max cDNA clone GENOME SYSTEMS CLONE ID: Gm-c1032-646 5' similar to TR:092T29 09ZI29 STEROL-C5(6)-DESATURASE.; mRNA sequence.

Disace-free water. The XhoI site Julian the first-strand synthesis primer was then restricted by digestion with XhoI from Promega (40U/ul); all XhoI sites in the cDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500 bp cutoff, using GibcoBRL Life Technologies' CDNA Size Fractionation column. The column eluent was then precipitated, redissolved, and ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) vector that has been digested with EcoR and XhoI, and phosphorylated by Stratagene). 100% of the white and 87.5% of the blue colonies appear to contain recombinant plasmids with CDNA inserts, based on size (n=28 and 8 respectively). This library was constructed by Dr. Paul Keim and Dr. Virgina Coryell."

/note="Vector: pBluescript II SK+; Site_I: ECORI; Site_2:
XhoI: The CDNA library was constructed from floral
meristenatic mRNA provided by Dr. Halina Knap of Clemson
University. Complementary DNA was synthesized from mRNA
using a primer consisting of a poly(dT) sequence with a
XhoI restriction site. ECORI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
CDNA fragments were directionally cloned into the
ECORI-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into bHiOB host
cells (GibcoBRL). This library was constructed in the
laboratory of Dr. Randy Shoemaker."

by Dr. J. Specht, University of Nebraska (Shoemaker and Specht, 1995). The CDNA library was constructed from mRNA isolated from leaf tissue at various developmental stages of 3 week old greenhouse grown plants. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site and a 3' anchor. EcoRI adapters were ligated to the blunt-ended CDNA fragments followed by XhoI digestion. The CDNA fragments ere directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated CDNA fragments were transformed into DHIOB host cells (GibcobRL). The library was constructed in cooperation with Dr. Paul Keim's laboratory at Northern Arizona University."

using a primer consisting of a poly(dT) sequence with a knot restriction site. EcoRI adapters were ligated to the blunt-ended CDNA fragments followed by XNoI dispession. The CDNA fragments were directionally cloned into the ECORI-XNOI restriction site of the pBluescript vector. The Injated CDNA fragments were transformed into DH10B host cells (GibcobRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."

Patent No. US/0020110809A1

GENERAL INFORMATION:

APPLICANT: Anhalowicz, Brian

APPLICANT: Zambrowicz, Brian

APPLICANT: Sands, Arthur T.

TITLE OF INVENTION: No. US/20020110809A1e1 Human Polynucleotides and the

TITLE OF INVENTION: Polypeptides Encoded Thereby

FILE REFERENCE: LEX-0018 USA

CURRENT APPLICATION NUMBER: US/09/560,863

CURRENT FILING DATE: 1999-04-30

FRIOR FILING DATE: 1999-04-30

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes isolated nucleic acid sequences which encode lipid metabolism related proteins (LMRP). The LMRP nucleic acids can be used to modify lipids and fatty acids, cofactors and enzymes in microorganisms and plants; described produce polyunsaturated fatty acids, and are especially useful in oilseed plants. The nucleic acids may also confer blotic or abiotic stress tolerance, particularly to maize, wheat, rye, act, triticale, rice, barley, soybean, peanel, cotton, rapeseed, canola, manihot, pepper, sunflower, tagetes, potato, tobacco, eggplant, tomato, vicia species, pea, alfalfa, coffee, cacao, tea, Salix species, oil palm, coconut, perennial grasses and forage crops. AAH50878 to AAH50882 represent primers used in the exemplification of the present invention. AAH5088 represents LMRP nucleotide sequences, and AAG80843 to AAH50968 represents LMRP nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   643

The polynucleotides are used in genemapping, in physical mapping and in positional cloning of genes. The polynucleotides and polypeptides are useful in forestry and agriculture for manipulation of isoprenoid metabolism, in medicine for therapeutic effects, including direct application in diseased organisms or indirect application by transgenic organisms and in fermentation and chemical processing industries involving isoprenoids. In plant capplications, manipulating isoprenoid pathways or isoprenoid composition may, for example, affect plant development, pest resistance, and the value of extractives (e.g. plane and myrcene). The ubiquitous and the value of extractives (e.g. plane and myrcene). The ubiquitous and the value of isoprenoids make the polynucleotides attractive targets for biotechnical applications in a variety of fields. AAA69527 to AAA69690 and AAB18004 to AAB18143 represent Eucalyptus grandis and plane readiate polynucleotides and proteins used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    705

The cdps sequences encode corn tassel-derived polypeptides (CDPs). The cdps sequences can be used for determining altered gene expression, to recover characteristics through hybrid breeding programs. (I) are also useful in the evaluation, and alteration of desired characteristics associated with growth and development, disease resistance, environmental adaptability, quality and yield, and as molecular markers for studying inheritance of multigene traits in a plant breeding program. (I) can be used to produce a tassel-specific profile of gene transcription, a transcript image, to clone regulatory elements for use in transformation vertors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel purified corn tassel-derived polynucleotide useful for determining altered gene expression, to recover regulatory elements and to follow inheritance of desirable characteristics through hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vectors, to express a polypeptide, to identify, isolate or extend identical or related corn tassel nucleic acid sequences from DNA libraries, in nucleic acid hybridisation or amplification technologies, as query sequences to determine homology of known sequences, as probe for use in Southern or Northern hybridisation, and to identify the presence of and/or to determine the degree of similarity between two

The cdps sequences encode corn tassel-derived polypeptides (CDPs). The cdps sequences (I) can be used for determining altered gene expression, to recover regulatory elements and to follow inheritance of desirable characteristics through hybrid breeding programs. (I) are also useful in the evaluation, and alteration of desired characteristics associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel purified corn tassel-derived polynucleotide useful for determining altered gene expression, to recover regulatory elements and to follow inheritance of desirable characteristics through hybrid breeding programs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Corn; corn tassul-derived polynucleotide; cdps; hybrid breeding; CDPs; inheritance; chiracteristic; growth; development; disease resistance; environmental adaptability; quality; yield; molecular marker; multigene trait plant breeding; corn tassel; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and concogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences complementary to (5s). The nucleic acid may be a peptide nucleic acid most be peptide nucleic acide polymorphisms and also to be used in an array for analysing diseases associated with CPG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for associatining genetic and/or spigneetic parameters for the diagnosis. CPC diseases, by analysing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters may be differences serving as basis for diagnosis avents which are disadvantageous to patients. The present sequence is one of the compared of the compared of the present sequence is one of the contract of the compared of t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     491 AAATTGTTGTTGAAGTGATTGTCTACTTTCAGACACATTCTTTTCTGCTTCTCTGAGA 550
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukemaia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TCTATTACCTTAAAATCAACGTTTACCTTCCCAAAGGTCTCGACTTTCACTTTTGTATTC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      251 ACTATTGCTTAATCGCTTTCTATGTTATCGATTTTTCAATTTAAGGAAGAGGGTTTCTTC

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 516 (actually 513 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and/or therapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genes associated with tumour suppressor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SNP;

The sequences can be used in the diagnosis and treatment of immune system discorders, including eye diseases such as retinopathy, neovascular glaucome and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia Alzheimer's disease, AnDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 422
